

# Cruise Control Kits

VDO introduces NEW Cruise Control Kits to their well trusted Range, VDO now has new listings for Audi, Ford, Mazda, Nissan, Suzuki, Toyota and more! See over page for full vehicle listing.

Whether you are a private motorist or fleet operator, and you're looking for substantial savings and fuel economy, its time you looked at a VDO Cruise Control system. Due to Cruise advanced technology the VDO system can help drivers travel safely and arrive relaxed, while effectively reducing their vehicle's fuel consumption.

VDO Cruise Controls can be fitted to most Australian and imported vehicles and are customized so there is no need to program or calibrate the units, saving time and frustration especially in busy areas where it is difficult to drive at a constant speed. This allows the driver to

concentrate on the road conditions and drive in amore relaxed manner.

All electronic operations are carried in an instant by the latest software designed by engineers who design products for some of the largest OEM clients in the world.

The E-Cruise is mostly "plug and play" so no time is wasted trying to solder wires upside down under a dash. All kits are supplied with all parts required and detailed fitting instructions.
